Spicer, MN 56288

The Middle Fork Crow River Watershed District would like to talk to you about Best Management Practices (BMPs).

BMPs are practices that help improve water quality, and they may assist in improving land productivity. There are a number of different types of BMP projects that a farmer could implement. Some examples are wetland restoration, buffer strips, sediment blocks, manure management, animal exclusions, CRP, etc. Currently the Middle Fork Crow River Watershed District and the Kandiyohi County SWCD has funding available to cost share on a wide number of BMPs. For more information contact the Middle Fork Crow River Watershed District
